WHAT IS CLAIMED IS:

- A chimeric pIX protein having at least one adenoviral pIX domain and a non-native amino acid sequence.
- The chimeric pIX protein of claim 1, wherein the non-native amino acid sequence is a ligand or an antigen.
- The chimeric pIX protein of claim 2, wherein the non-native amino acid sequence is a ligand that binds to a substrate present on the surface of a cell.
- 4. The chimeric pIX protein of claim 3, wherein the ligand recognizes a CD40 antigen
- The chimeric pIX protein of claim 3, wherein the ligand is an RGDcontaining or polylysine-containing sequence.
- The chimeric pIX protein of claim 1, wherein the non-native amino acid is constrained by a peptide loop within the chimeric protein.
- The chimeric pIX protein of claim 6, wherein the loop comprises a disulfide bond between non-adjacent amino acids of the protein.
- The chimeric pIX protein of claim 1, wherein the non-native amino acid sequence constitutes the C-terminus of the chimeric protein.
- The chimeric pIX protein of claim 1, wherein the non-native amino acid sequence constitutes the N-terminus of the chimeric protein.
- 10. The chimeric pIX protein of claim 1, wherein the non-native amino acid sequence is located internally within the chimeric protein.
- The chimeric pIX protein of claim 1, wherein at least one adenoviral pIX domain consists essentially of an adenoviral pIX peptide sequence truncated at the Cterminus.
- The chimeric pIX protein of claim 1, wherein at least one adenoviral pIX
 domain consists essentially of an adenoviral pIX peptide sequence truncated at the Nterminus.

- 13. The chimeric pIX protein of claim 1, comprising a first adenoviral pIX domain consisting essentially of an adenoviral pIX peptide sequence truncated at the C-terminus and a second adenoviral pIX domain consisting essentially of an adenoviral pIX peptide sequence truncated at the N-terminus.
- The chimeric pIX protein of claim 13, wherein the first and the second adenoviral pIX domains do not share any common peptide sequences.
- 15. The chimeric pIX protein of claim 13, wherein a spacer peptide domain separates the first and the second adenoviral pIX domains.
- The chimeric pIX protein of claim 15, wherein the spacer peptide domain comprises the ligand domain.
- 17. The chimeric pIX protein of claim 1, having only one adenoviral pIX domain consisting essentially of a full-length adenoviral pIX peptide sequence.
 - 18. A nucleic acid encoding the chimeric pIX protein of claim 1.
 - 19. An adenoviral capsid containing the pIX protein of claim 1.
 - The adenoviral capsid of claim 19, which binds dendritic cells.
- 21. The adenoviral capsid of claim 19, comprising a mutant adenoviral fiber protein having an affinity for a native adenoviral cellular receptor of at least about an order of magnitude less than a wild-type adenoviral fiber protein.
- The adenoviral capsid of claim 19, comprising an adenoviral penton base protein having a mutation affecting at least one native RGD sequence.
- 23. The adenoviral capsid of claim 19, comprising an adenoviral hexon protein having a mutation affecting at least one native HVR sequence.
- The adenoviral capsid of claim 19, lacking a native glycosylation or phosphorylation site.
- The adenoviral capsid of claim 19, which is conjugated to polyethylene glycol.
- 26. The adenoviral capsid of claim 19, which elicits less immunogenicity in a host animal than does a wild-type adenovirus.

- 27. The adenoviral capsid of claim 19, comprising a second non-adenoviral ligand conjugated to a fiber, a penton, a hexon, a protein IIIa or a protein VI.
- 28. The adenoviral capsid of claim 27, wherein the non-native amino acid is a ligand and wherein the second non-adenoviral ligand recognizes the same substrate as the non-native amino acid.
- A composition of matter comprising the adenoviral capsid of claim 19 and a nucleic acid.
 - 30. The composition of matter of claim 29, further comprising a liposome.
- An adenoviral vector comprising the adenoviral capsid of claim 19 and an adenoviral genome.
 - 32. The adenoviral vector of claim 31, which is replication incompetent.
- The adenoviral vector of claim 31, which does not productively infect HEK-293 cells.
- 34. The adenoviral vector of claim 31, wherein the adenoviral genome comprises a non-native nucleic acid for transcription.
- 35. The adenoviral vector of claim 34, wherein the non-native nucleic acid for transcription is operably linked to a non-adenoviral promoter.
- 36. The adenoviral vector of claim 35, having a ligand that binds to a substrate present on the surface of a cell and wherein the non-adenoviral promoter is active within the cell.
- The adenoviral vector of claim 35, wherein the non-adenoviral promoter is a tissue-specific promoter.
- 38. The adenoviral vector of claim 35, wherein the non-adenoviral promoter is a regulable promoter.
- A method of infecting a cell, comprising contacting a cell with an adenoviral vector of claim 31.

THE PARTY OF THE P

40. The method of claim 39, wherein the adenoviral genome comprises a nonnative nucleic acid encoding a protein, and wherein the nucleic acid is expressed within the cell to produce the protein.
